Phenolic resins - an overview | ScienceDirect Topics Phenolic resins totalling 916 million pounds went into the adhesive and bonding markets in 1993 (Table 2-3), making the adhesive and bonding market the second largest outlet for phenolic resins. It is arguable that the adhesive and bonding market includes the composite wood and laminating applications because phenolic resin is the bonding material in these applications. [NIIR] Phenolic Resins Technology Handbook | Adhesive ... Phenolic laminates are made by impregnating one or more layers of a base material such as paper, fiberglass or cotton with phenolic resin and laminating the resin saturated base material under heat and pressure. Phenolic Resins Technology Handbook Phenolic resins are obtained by the reaction of phenols with aldehydes. The simplest representative of these types of compounds, phenol and formaldehyde, are by far most important. Phenolic resins are mainly used in the production of circuit boards.
